

Lowering cost and complexity with a hosted VoIP Solution.

Hosted VoIP Providers offer support and guidance that many small organizations lack. With an off premise solution there is no need for server deployment, configuration or maintenance and the risk associated with a new installation. Although an Asterisk based solution may be the answer for the larger than 12 phone office, the ease of deployment of a hosted solution should make it the first choice in small companies that lack the IT professionals for more complex installations.

Seven reasons to consider a Hosted VoIP solution.

- 1) Features.** A hosted VoIP phone system should have lots of features, more than what you might get otherwise.
- 2) Initial Cost.** With the only real outlay going for IP phones and possibly a router, your initial cost is low.
- 3) Maintenance.** The provider maintains the server reducing your overhead.
- 4) Support.** With many providers the expense of support personnel is included in the plan.
- 5) Expansion as needed.** Adding another line of phone is easy. Keep your costs low and grow into your system.
- 6) Lower calling costs.** Pick a plan that suits your business model. With lower toll charges heavy callers save quite a bit.
- 7) Remote extensions.** With more remote employees working from home, a hosted solution makes this as easy as plugging in a phone.
